Busy Beavers

Known for their unique ability to adapt their environment to suit them, beavers are fascinating animals.

With powerful jaws and strong teeth, beavers fell trees and use them to build log and mud structures that block streams. These dams turn fields and forests into ponds.

Beaver dams are an important part of the ecosystem, helping slow floodwaters and control erosion.

These semi-aquatic rodents move easily through the water thanks to their stiff, flat tails and webbed feet. Their thick fur is waterproof, and they can hold their breath underwater for up to 15 minutes.

Beavers have orange teeth that never stop growing. They eat bark, roots and leaves from trees, as well as aquatic plants.
